CXdynamIQ

Website Revamp & Development Proposal — AI-Powered Omnichannel CX Platform

Prepared for	CXdynamIQ
Prepared by	Kamar — Web Developer
Date	18 September 2026

What this is	A full website redesign — new look, new messaging, easy for your team to update
Built with	Laravel — a reliable, widely-used framework with an easy content-editing panel
How we start	Sitemap + homepage layout approved by you first, then we build

This proposal is for redesigning the CXdynamIQ website so it clearly presents the company as an AI-powered customer experience platform — moving away from how a traditional call-center company looks and reads. The existing CXQ360.ai platform stays exactly as it is; this project only touches the main marketing website.

Nothing gets built until you've seen and approved the page structure and homepage layout — that's step one, and it's covered at no risk to you before the rest of the build begins.

01 — What We'll Build

A modern, mobile-friendly website that explains your platform clearly within seconds of landing on it.

Core pages: Home, Platform, AI-Powered CX, Omnichannel Engagement, Contact Center, Agent Experience, AI Quality & Conversation Intelligence, Analytics, Agentic AI, Human + AI Collaboration, Integrations.

Individual pages for each industry you serve — banking, insurance, telecom, healthcare, retail and others, as finalized in the sitemap.

A clear path to conversion throughout — Book a Demo / Start Free Trial buttons that lead to CXQ360.ai.

Three rounds of revisions included, with flexibility if minor tweaks come up after.

---

02 — Design Direction

Clean, modern look in line with enterprise AI platforms like NICE, Genesys and Exotel — used only as inspiration, never copied.

Visuals that show your product in action: dashboard screenshots, customer-journey diagrams, and simple flow illustrations rather than generic stock images.

Strong, clear calls to action on every page.

---

03 — Easy Content Editing

Your team can update page text, images and industry pages yourselves — no developer needed for routine changes.

- A simple, secure admin panel where changes go live immediately after saving — no delays, no technical steps.
- Login protected, with two-factor authentication for extra security.
- Page titles and descriptions (for Google search) are editable too.

---

04 — Connecting to CXQ360.ai

When someone clicks Book a Demo or Start Free Trial, they're taken straight into CXQ360.ai with an account already set up for them.

Needs the API/login details for CXQ360.ai from your side to set this up.

---

05 — Capturing Leads

- Contact and demo-request forms placed at the key points where a visitor is ready to act.
- Every submission is sent to business email instantly.
- Forms are protected against spam and bad input.

---

06 — Added Value: SEO & Analytics Setup

> **I include these essential services as part of the project — not as expensive add-ons later.**

- **Technical SEO basics:** Clean URLs, proper XML sitemap, and correct heading structures so search engines understand your pages properly.
- **Performance:** Optimized so pages load quickly on both desktop and mobile.
- **Analytics Ready:** Basic Google Analytics and tracking setup so you can measure how many visitors convert into demo requests.

---

07 — Security & Speed

Built following standard, well-tested security practices — protection against common attacks, safe handling of passwords and data.

Optimized so pages load quickly on both desktop and mobile.

---

08 — Technology

Component	Technology	Benefit
Framework	Laravel	A mature, dependable platform used by enterprises worldwide, well-suited to your existing hosting.
Design/Frontend	Blade + Tailwind CSS	Clean, modern styling, fully responsive across all screens.

Component	Technology	Benefit
Database	MySQL	Standard, reliable, works flawlessly on your current hosting.
Admin Panel	Custom Content Editor	Built-in editor so your team can make updates independently.
Hosting	Shared/Existing Hosting	Works on your existing shared hosting setup — no extra infrastructure needed.

09 — Why Work With Me Directly

- You deal directly with the person building your site — no account managers, no back-and-forth through a team.
- Faster responses and faster turnaround on feedback, since there's no handoff between people.
- Groundwork based on your brief is already in progress — work continues immediately once the sitemap is approved.
- Clear, upfront pricing with no hidden scope — you'll always know exactly what you're paying for.

10 — Timeline

Phase	Duration	Deliverables
Phase 1	Week 1	Sitemap and homepage layout ready for your review and approval.
Phase 2	Weeks 2–4	Core pages designed and built, shared with you as they're ready.

Phase	Duration	Deliverables
Phase 3	Weeks 5–6	Industry pages, admin panel, and CXQ360.ai connection set up.
Phase 4	Week 7	Final review, revisions, and testing.
Phase 5	Week 8	Site goes live.

This assumes timely feedback and content from your side at each step.

---

11 — Investment

Milestone	Payment	Trigger
Milestone 1	30%	On approving the sitemap & homepage layout
Milestone 2	40%	On completing core pages, ready for review
Milestone 3	30%	On final approval, before going live

Total project fee: This will be confirmed once we finalize how many industry pages and how much content detail is needed.

---

12 — Value-Add: Post-Project Support & Warranty

> **This is where I go beyond what others offer.**

Support	Details
30-Day Free Support Period	After project handover and go-live, I provide **1 full month of free support** covering bug fixes, layout tweaks, and any issues that arise.
Minor Changes Included	During the 30-day period, small changes like updating a headline, swapping an image, or adjusting colors are handled at **zero additional cost**.
Direct Communication	You can reach me directly via WhatsApp or email during the support period — no ticketing systems, no waiting.
Full Handover	Complete handover so any developer can work on the site in the future if needed.

---

13 — What's Not Included

- Any changes to CXQ360.ai itself — its AI, voice, telephony or omnichannel systems.
- Billing, subscriptions or licensing systems.
- Any integrations beyond what's listed in this proposal, unless agreed separately.
- Ongoing SEO marketing or paid advertising.
- Support after handover, unless a separate maintenance plan is agreed.

---

14 — What We'll Need From You

- Access to your hosting so we can deploy the site if not we can provide from our end!
- Your logo, brand colors, and any existing brand guidelines.
- Your preferred email and WhatsApp number for receiving leads.
- Timely feedback at each review step, so the timeline above stays on track.

---

15 — Next Steps

Step	Action
1	Review this proposal and share any questions or feedback.
2	Confirm the scope (number of industry pages, content depth).
3	Approve the proposal — we begin with the sitemap and homepage layout immediately.
