**CXdynamIQ**

# Website Revamp & Repositioning

*Reference Brief for Website Development*

AI-Powered Omnichannel Customer Experience Platform

**Prepared for:** Website Development Team

**Prepared by:** Mohan Singh — CXdynamIQ

**Main site:** https://cxdynamiq.com/

**Demo / trial platform:** https://cxq360.ai/

**Date:** 16 September 2026

## Contents

- Purpose of This Document
- 1. Project Overview & Objective
- 2. Main Website — CXdynamIQ Positioning
- 3. Demo / Trial Journey
- 4. Recommended Website Structure
- 5. Agentic AI
- 6. Human + AI Collaboration
- 7. Integrations
- 8. Industry / Use Cases
- 9. Website Design Direction
- 10. Process & Next Steps

## Purpose of This Document

This brief has been prepared to share with the website development team as the reference document for the CXdynamIQ website revamp and repositioning project. It captures the business context, target positioning, recommended site structure, and design direction the new website should reflect. It is intended to accompany the introductory note below.

> **Note to developer:** Please review this document in full before scoping the work. Section 9 (Process & Next Steps) asks that the proposed sitemap and homepage wireframe/content structure be finalized and agreed first, before UI and content development begins.

## 1. Project Overview & Objective

We need to revamp and reposition our main website so that it reflects current market positioning in the CX / Contact Center / AI-powered Omnichannel space, rather than presenting CXdynamIQ primarily as a traditional contact-center/omnichannel solution.

The market has shifted heavily toward AI-first Customer Experience: AI Agents, Agentic AI, Omnichannel Engagement, Intelligent Routing, Agent Assist, Conversation Intelligence, and AI-driven Analytics/QA. The new website needs to communicate this positioning clearly and immediately.

> **Overall objective:**
>
> CXdynamIQ = AI-Powered Omnichannel Customer Experience Platform
>
> CXQ360.ai = Product Trial / Demo / Customer Platform

## 2. Main Website — CXdynamIQ Positioning

The website should clearly position CXdynamIQ as an:

> **AI-Powered Omnichannel Customer Experience & Contact Center Platform**

The homepage should immediately communicate the following capabilities:

- AI-powered customer engagement
- Omnichannel customer journeys
- AI Voice & Chat Agents
- Human + AI collaboration
- Agentic AI
- Intelligent routing
- Agent Assist / Copilot

- Conversation Intelligence
- AI-powered Quality Assurance
- Real-time CX analytics
- CRM and enterprise integrations

The messaging should be modern, enterprise-focused and outcome-driven.

## 3. Demo / Trial Journey

We also want to change the demo flow. When a customer clicks “Get Started / Try Demo / Start Free Trial,” they should be routed to:

> https://cxq360.ai/

On CXQ360, the customer should be able to:

1. Register / create an account
2. Access a limited version of the CX platform
3. Experience selected features on a trial basis
4. Upgrade/extend the trial based on the applicable usage/agent/customer requirements
5. Eventually move to a license-based commercial model

So the main website should act as the product/company showcase and lead-generation platform, while CXQ360.ai becomes the product trial/demo environment.

## 4. Recommended Website Structure

Please consider restructuring the website around the following sections.

### Home

AI-powered Omnichannel CX platform, with a clear call to action:

> **“Experience CXdynamIQ” / “Start Your Free Trial” / “Book a Demo”**

### Platform

Explain the complete CX platform and how Voice, Digital Channels, AI, and Human Agents work together.

### AI-Powered CX

- AI Voice Agents
- AI Chat Agents
- Agentic AI

- AI-powered self-service
- AI Assist / Agent Copilot
- Conversation Intelligence
- Intent Detection
- Sentiment Analysis
- Automated Summarization
- Next Best Action
- AI-powered workflow automation

## Omnichannel Engagement

Show unified engagement across:

- Voice
- WhatsApp
- SMS
- Web Chat
- Facebook Messenger
- Viber
- Email
- Other digital channels as applicable

Key message: customers can move between channels while maintaining conversation context and customer history.

## Intelligent Contact Center

- Intelligent / Skill-based Routing
- IVR
- Inbound & Outbound
- Predictive Dialer
- Progressive Dialer
- Campaign Management
- Queue Management
- Supervisor Dashboard
- Real-time Monitoring
- Agent Management

## Agent Experience

Position the human agent as part of the AI-powered CX ecosystem.

- AI Agent Assist

- Real-time recommendations
- Knowledge suggestions
- Customer context
- Live transcription
- Sentiment alerts
- Automated summaries
- Automated after-call work
- Next-best-action recommendations

## AI Quality & Conversation Intelligence

**This should be a major section.**

- AI QA / Automated Quality Assurance
- 100% interaction analysis
- Conversation analysis
- Compliance monitoring
- Sentiment analysis
- Intent analysis
- Agent performance analysis
- Script adherence
- Automated scoring
- Coaching insights

## CX Analytics & Business Intelligence

Dashboard/analytics messaging should focus on measurable business outcomes. Key capabilities:

- Conversation volumes
- AI vs Human handling rates
- First Contact / First Call Resolution (FCR)
- Customer Satisfaction (CSAT)
- Intent scores
- Sentiment scores
- Average Response Time
- Average Handle Time (AHT)
- Agent productivity
- Resolution rates
- Escalation rates
- Automation rate

- AI containment / resolution rate
- Channel-wise performance
- Campaign performance

These metrics should be presented visually through modern dashboard-style graphics rather than only text.

## 5. Agentic AI

Please give Agentic AI a dedicated section. The positioning should explain how AI can move beyond simple chatbot/voicebot responses and assist with the following flow:

> **Understand → Reason → Act → Resolve → Learn**

Example flow:

This is an important part of current enterprise CX positioning.

## 6. Human + AI Collaboration

We should avoid positioning AI as simply “replacing agents.” Instead, the message should be:

> **AI handles automation and repetitive interactions, while human agents handle complex, sensitive and high-value conversations.**

Show the complete journey:

> **AI Self-Service → AI Agent → Human Agent → AI Assist → Resolution → AI QA & Analytics**

This will make the platform positioning much stronger.

## 7. Integrations

Add a strong integration section covering:

- CRM
- Helpdesk / Ticketing
- ERP
- APIs
- Webhooks
- Existing enterprise applications
- AI/LLM integrations where applicable

The message should emphasize that CXdynamIQ can integrate with the customer's existing technology ecosystem rather than requiring everything to be replaced.

## 8. Industry / Use Cases

Please add industry/use-case pages such as:

- Banking & Financial Services
- Insurance
- Telecom
- E-commerce
- Logistics
- Healthcare
- Travel & Hospitality
- Retail
- Education
- Collections
- Sales & Lead Qualification
- Customer Support

Each page should show the relevant AI + Omnichannel + Contact Center use cases.

## 9. Website Design Direction

The overall UI/UX should look like a modern AI SaaS / Enterprise CX platform, not a traditional call-center website. We should use:

- Clean modern design
- AI-focused visuals
- Product UI/dashboard screenshots
- Customer journey diagrams
- AI/human workflow illustrations
- KPI cards
- Interactive product sections
- Strong CTAs
- Minimal text with meaningful visuals
- Clear navigation
- Enterprise-oriented messaging

**The website should communicate the product within the first 5–10 seconds.**

### Reference Websites

Please review these websites carefully for positioning, structure, content and UX inspiration:

- Exotel – AI-powered Contact Center
- NICE – AI-powered CX / Omnichannel
- Genesys Cloud CX
- Elision Technologies – Success Stories
- CleverTap – Omnichannel Engagement

*The intention is not to copy their content/design, but to understand the current market positioning and bring CXdynamIQ to a comparable modern level.*

## 10. Process & Next Steps

> **Important:** Please first prepare a proposed website structure / sitemap + homepage wireframe/content structure before starting development. We would like to finalize the new positioning and page structure first, and then proceed with the actual UI/content development.

Additional requirements to build into the plan and delivery:

- SEO optimization
- Mobile responsiveness
- Page speed / performance
- Lead generation features (forms, CTAs, tracking)
- Clear conversion paths throughout the site
